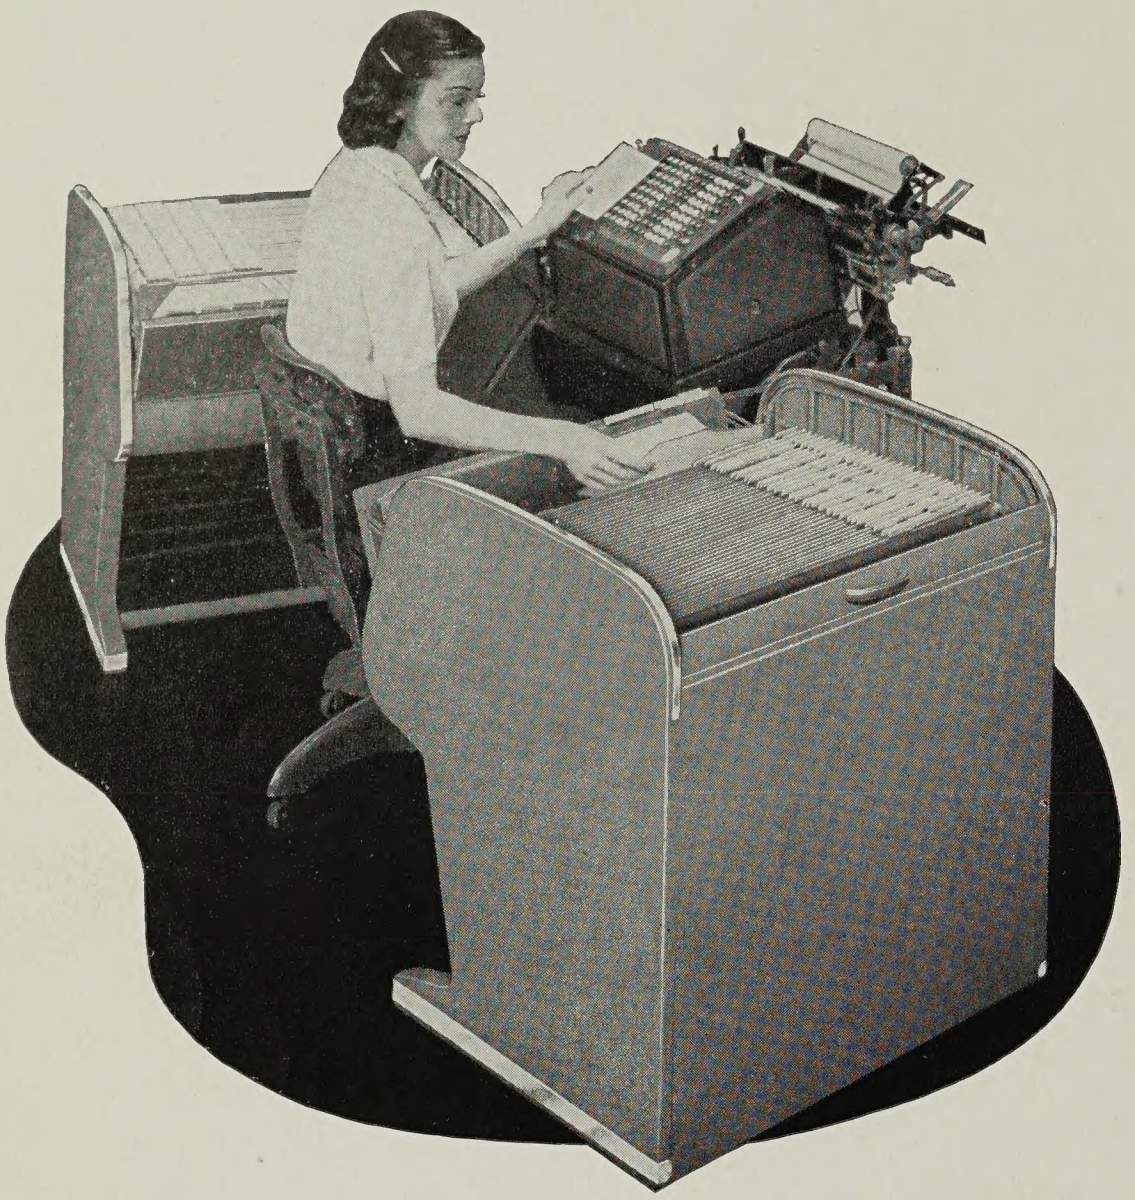
ACME VISIBLE

ACME VERI-VISIBLE

FOR MACHINE POSTED RECORDS



There has been a long recognized need for equipment that would provide VISUALIZED CONTROL and faster handling of Machine Posted records. Acme Veri-Visible represents a new and advanced type of visible record equipment for this purpose.

With the indexing titles of all cards plainly exposed on the diagonal margins, any card can be instantly located, removed, machine posted and replaced. The "card out" signal speeds up refiling—clearly indicating where the card belongs.

Movable and/or permanent signals are effectively used on the three visible margins (horizontal, diagonal, vertical) to indicate past due accounts, items to be repurchased, or other important facts.

Acme Veri-Visible equipment will accommodate cards used in any make of bookkeeping machine.

This illustrates a single bank of a machine posted Veri-Visible Accounts Receivable record. The "Balance" of every account is right in sight. Note how the overdue account—the one with the red signal—stands out. Every such past due account can be located with a glance across the tops of the cards in a cabinet.

ACME VERI-VISIBLE

FOR HAND POSTED RECORDS

Acme Veri-Visible Equipment is just as advantageously used for hand posted records. An operator may have, in sight and reach, thousands of vertically filed cards, all visibly indexed—instantly available for quick reference and fast posting.

All Veri-Visible units are the proper height for easy removal of cards to the Posting Table and quick replacement in the file—all with a minimum effort and few motions.

Signals may be used on visible margins to indicate important facts and changing conditions; they remain with the cards wherever taken.

Note the printed, automatic "CARD-OUT" signal, also the wide gap in the spacing thus instantly revealing that a card is out.

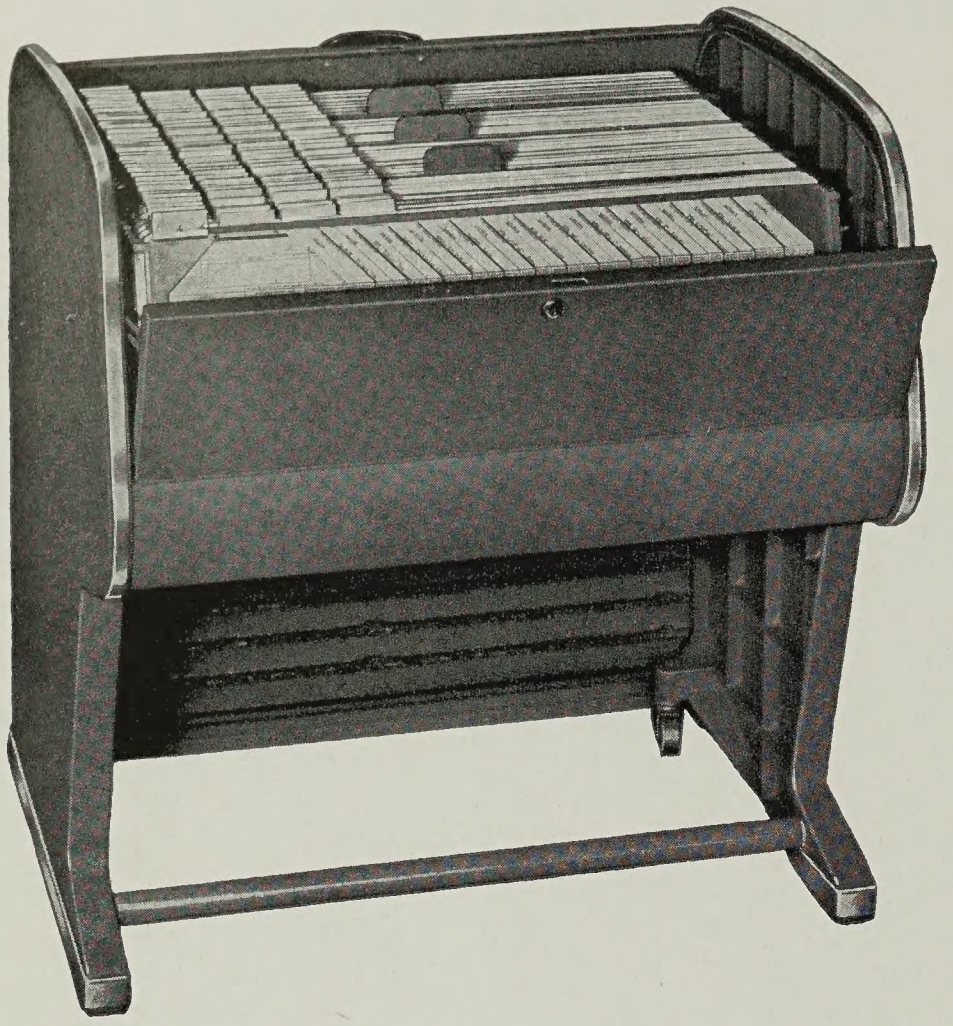
INVENTORY

This is a bank of a Veri-Visible Purchase and Stock record system. Note how the two important factors, the "Balance Available" and "Balance on Hand" of each item, are automatically visible. The simple act of keeping up the record produces this fine result.

Acme VERI-VISIBLE

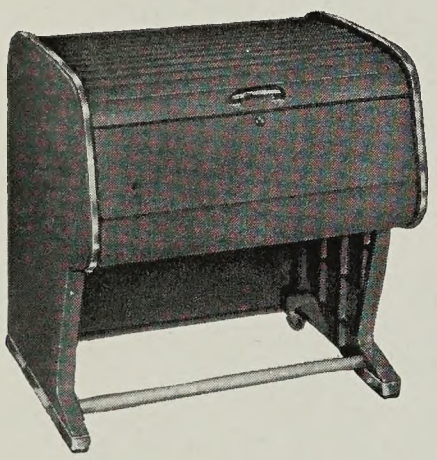


The Acme Veri-Visible Floor Model Cabinet is recommended where it is desired to provide a large number of *visibly* indexed vertically filed cards—all readily accessible and instantly available—in one place. Cabinets may be used singly, in pairs as shown on pages 2 and 3. grouped in a U-arrangement, or placed in straight line—as preferred for efficient operation.

The hinged front of the floor model cabinet swings forward, as shown in illustration at left. This gives a wide V-opening affording greater visibility and providing a correct working angle for the panels. Each unit is equipped with three full-width Divide-a-Files with extended hand holds making it easy and convenient for the operator to part the record in groups, thus, speeding up reference to any card in the file.

The smooth-working metal roller curtain engages the top of the swinging front, and locks, completely closing the unit. When open the roll-curtain cover slides all the way back, out of the way.

The attractive, modern grey wrinkle finish harmonizes with other equipment—adding a cheerful tone to the office.



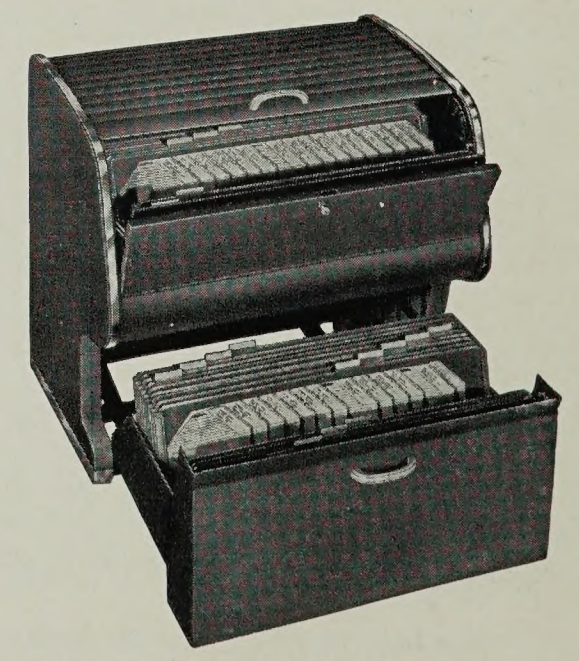
TREMENDOUS VISIBLE RECORD CAPACITY

For example, over 8,000 record cards size 5x8" with overall visibility. In addition you can have almost 3,000 greater card capacity with the expansion compartment illustrated below.

Unit provides for cards from 6" to 12" in height and whatever width is needed. Large visible margins—from ½" to 2"—or more, if desired. Occupies only 2½' by 2¼' of floor space.

EXPANSION (OR TRANSFER) COMPARTMENT

(Optional Equipment) The expansion (or transfer) compartment is a well designed, substantially built unit in the lower part of the floor model cabinet, utilizing space that would otherwise be wasted. It is recommended for housing temporarily inactive records transferred from the main compartment, or to provide additional record capacity. This compartment operates on roller suspensions—its contents instantly available and readily accessible. Limited to cards not more than 9½" high. See price table on opposite page.



Floor Model Cabinets

Acme Veri-Visible Floor Model Cabinets are available for cards 6" to 12" high—and in any width desired. The steel bottom rails are spaced 1" apart for cards having .5" (½") visible margins (or multiples thereof) and 1.2" apart for cards with .6" visible margins (or multiples thereof).

JUNIOR FLOOR MODEL CABINET

The "Junior" illustrated at the right is the same in width and height as the floor model cabinet but is 8" less in depth (front to back). It holds approximately 50% as many record cards. The design and construction are substantially the same as the larger unit, the one principal difference being that the Junior floor model cabinet cannot be equipped with the expansion (or transfer) compartment.

FLOOR MODEL CABINETS—Complete with "A" Dividers*

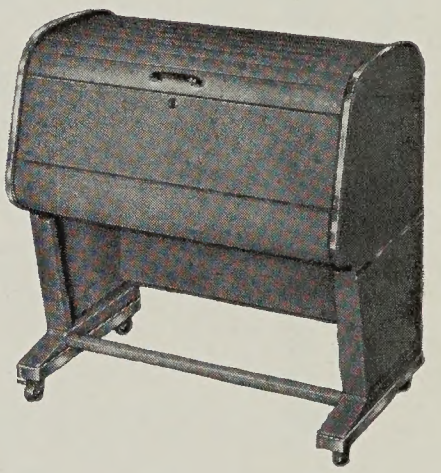
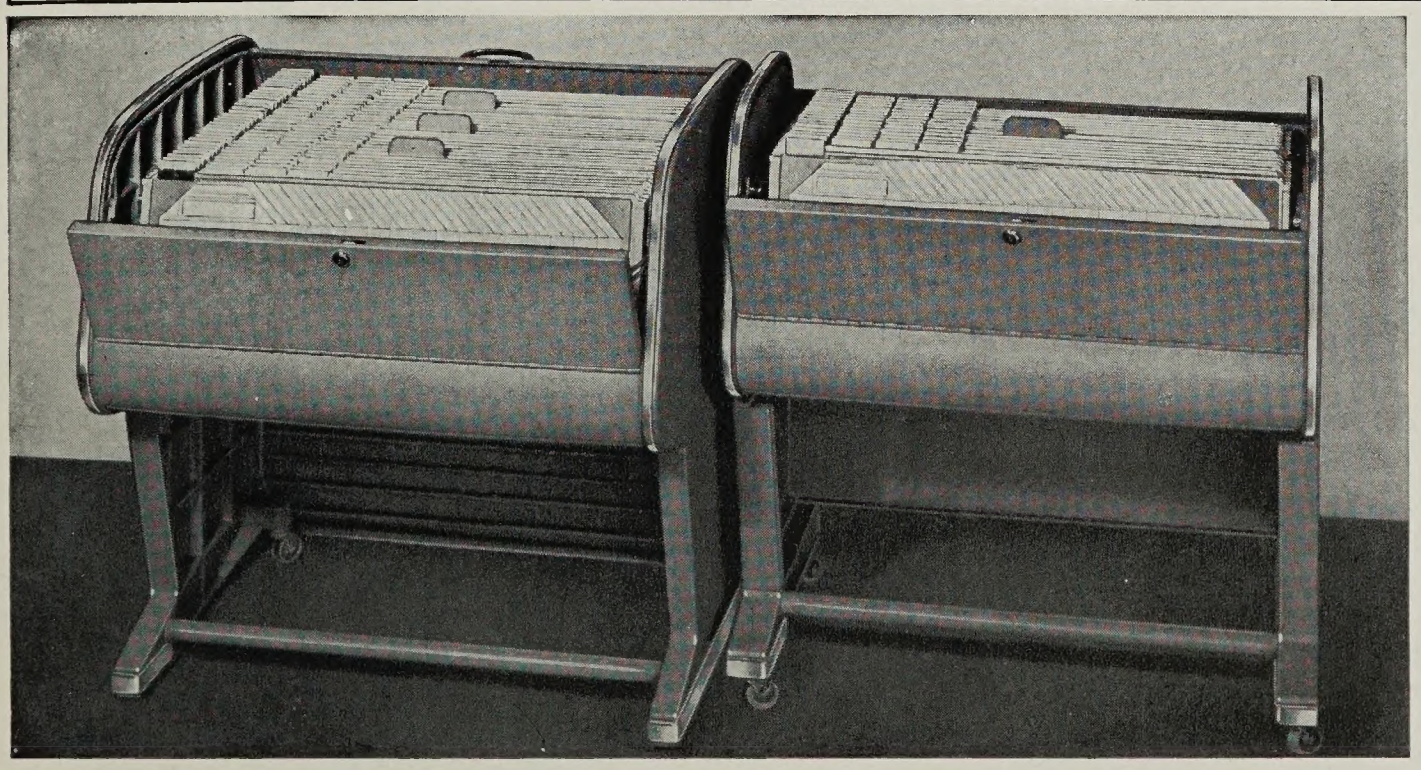
Expansion Compartments not available with Jr. Floor Model Cabinets.

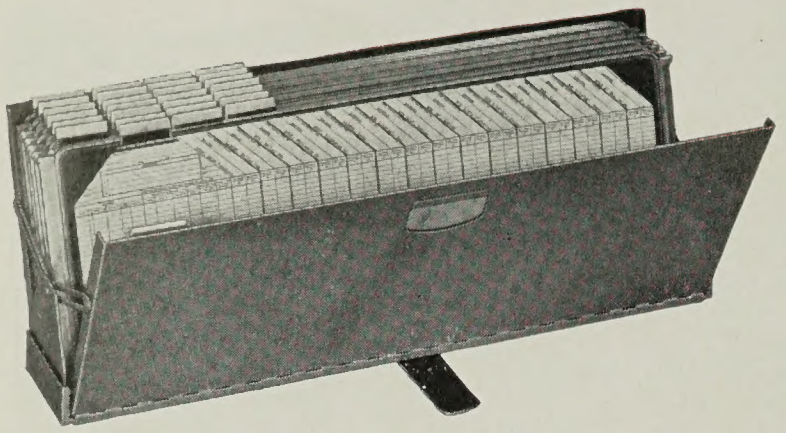
*Add for quantity of "B" or "C" dividers required

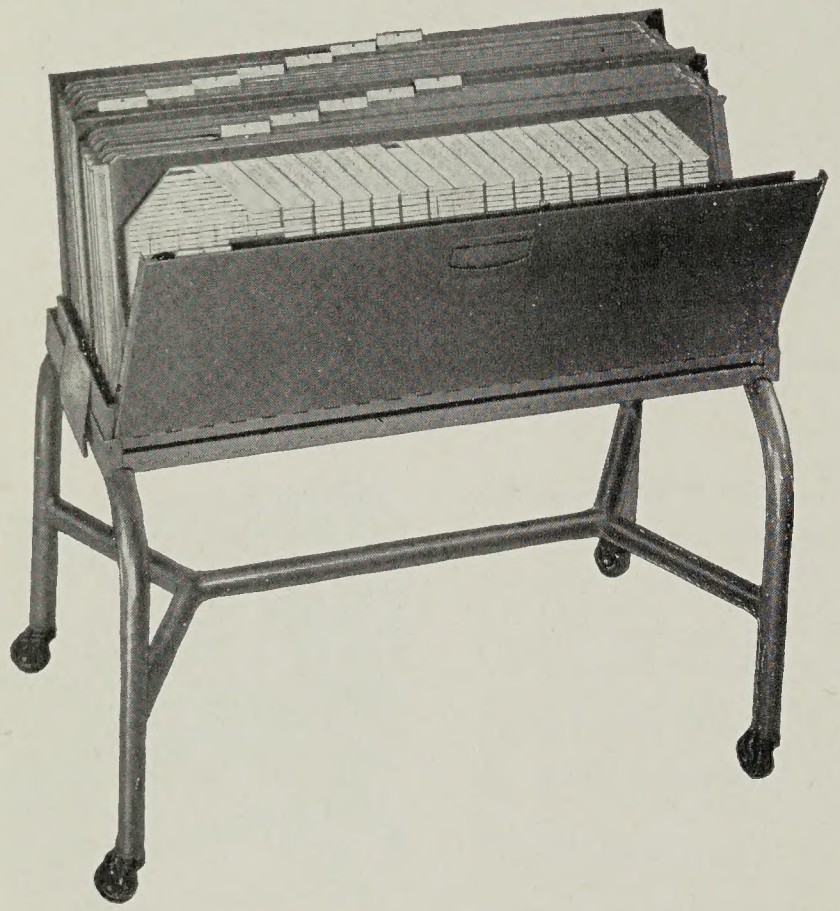




Comparative view of Floor Model Cabinet and Jr. Floor Model Cabinet. The height and width are the same for both; the Depth of the Jr. unit is 8" less.

ACME VERI-VISIBLE Sectional Units





These may be housed in Floor Model Cabinets for distribution to a number of clerks, each cabinet accommodating four units. They may also be used as independent record units—on a desk or stand. The swivel stabilizer, underneath the base, is turned cross-wise when unit is used on a desk or table.

FINISH: Neutral Grey.

DIMENSIONS

Width ..... 27¾"
Depth ..... 5⅛" (8" high cards or less)
4½" (9" high cards or more)
Height ..... 9½" (8" high cards or less)

For higher cards height is increased proportionately.

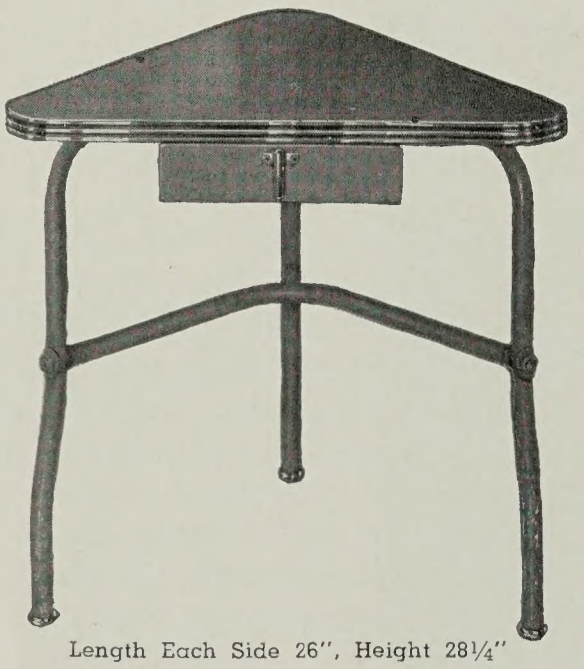
Stand—to hold one or two sectional units				41.75	42.75	43.75

V-V Posting Table

The V-V Posting Table offers great convenience and added operating efficiency to any Veri-Visible record installation. It is used alongside a Floor Model cabinet, or a Sectional Unit on a stand; or it may be used between two units.

The round cornered black linoleum top (with 1" metal binding) provides an excellent working surface—non-glaring, non-slipping. The drawer has ample room for working tools and miscellaneous supplies.



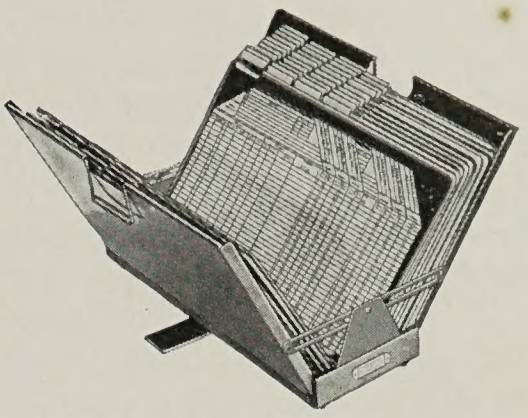
Length Each Side 26", Height 28¼"

	Zone 1	Zone 2	Zone 3
Posting Table	$54.75	$56.00	$57.50

Acme VERI-VISIBLE Portable Trays

This compact, portable unit provides for visibly indexing and signalling either machine or hand posted cards filed vertically.

Trays are of steel construction and equipped with swing handles for lifting. They can be placed in any standard 19" deep safe when fire protection is desired.



ACME VERI-VISIBLE TRAY STAND

This tubular steel stand with solid top is designed to accommodate one or two Veri-Visible Portable Trays. The clamp device at each end securely fastens trays to the stand. Clamps are easily released for removal of trays. Stands are supplied with smooth rolling ball-bearing swivel casters, two equipped with locking brakes.

SIZE—18½" wide, 17" deep, 17½" high.

Acme VERI-VISIBLE Dividers

In a vertical visible card system, it is the *Divider* that is subjected to the greatest amount of handling and receives the most abuse. Acme Veri-Visible "A" and "B" Dividers will withstand the severe strain of the most active record.

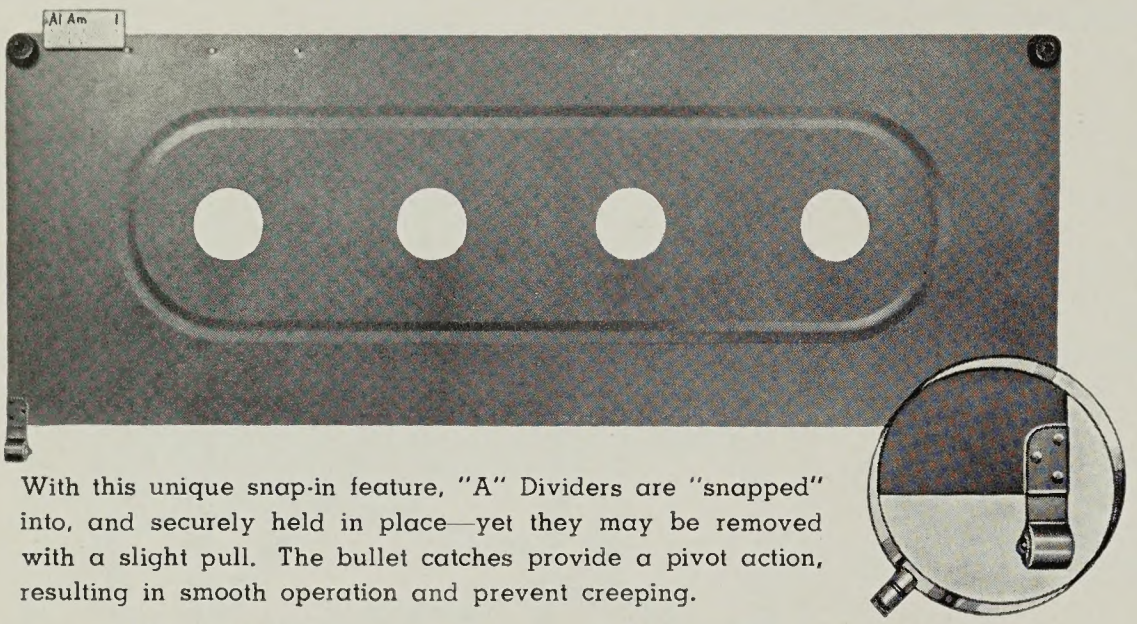
Both "A" and "B" Dividers are made of aluminum with embossed channels for strength and rigidity.

The "A" type is the master Divider and must be used in every unit of equipment. Smooth working bullet catches at each end provide quiet, frictionless operation.

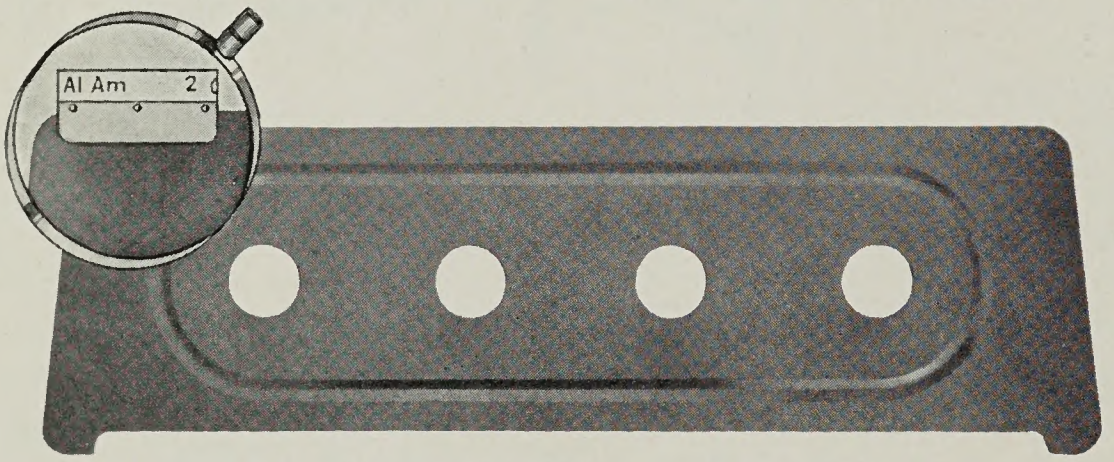
The "B" supplemental Dividers (used between "A" Dividers), are self reinforced with all corners rounded.

The number of "B" Dividers used between "A" Dividers is dependent upon the build-up (thickness) of each bank of cards. The amount of build-up is determined by three factors—(1) card width, (2) thickness of stock, and (3) width of visible margin. Complete capacity tables, showing the maximum number of "B" Dividers that can be used, are on Page 10.

Both "A" and "B" Dividers are supplied in a light neutral grey finish which gives adequate light reflection without glare to the operator.



With this unique snap-in feature, "A" Dividers are "snapped" into, and securely held in place—yet they may be removed with a slight pull. The bullet catches provide a pivot action, resulting in smooth operation and prevent creeping.



Both "A" and "B" Dividers are supplied with a sturdy transparent, dual vision index tab.

"A" DIVIDERS

Item No.	Card Height	Zone 1	Zone 2	Zone 3
6A	6″	$3.05	$3.15	$3.20
7A	7″	3.05	3.15	3.20

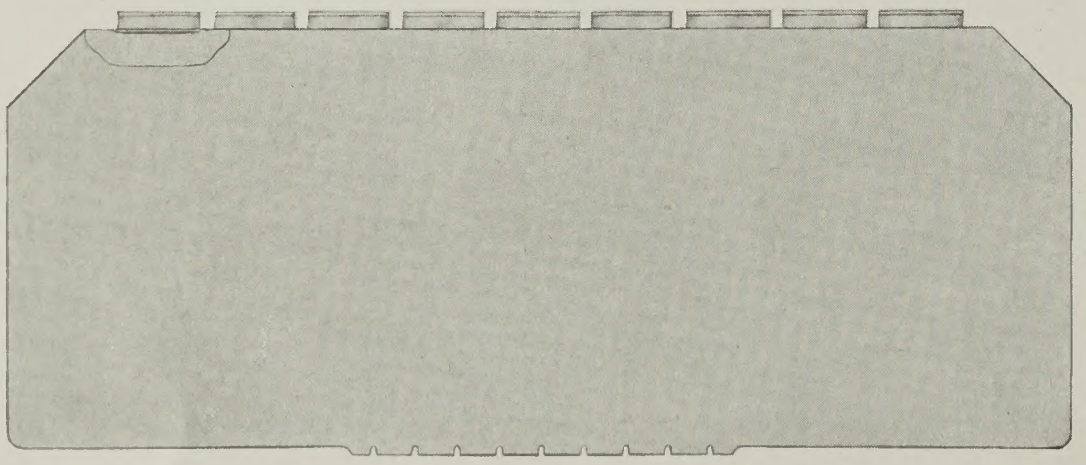
ADJUSTABLE INDEX TABS

(All zones)

1-499	50c each
500-999	45c each
1000 and over	42c each

"C" (Capacity) DIVIDERS

"C" DIVIDERS—Made of heavy Index Bristol with reinforced celluloid index tabs in staggered positions. The body height is the same as the height of the record cards with which they are used. They may be used in lieu of "B" Dividers; and being thinner they often increase the record capacity (see tables on Page 10).



PRICES—*All Heights*

(Specify Height Card and Tab Positions Desired)

"C" DIVIDERS (all heights, all zones) 45c EACH

Acme VERI-VISIBLE Printed Forms

VERI-VISIBLE cards are made to fit the record; it is not necessary to compromise or sacrifice to fit size limitations. Cards can be 6" to 12" in height (in 1" multiples) and *any width* required. As wide visible margins as needed may be provided.

Our library contains a great variety of VERI-VISIBLE forms for both Machine and Hand posted records. Samples will be sent upon request.

Services of the Acme System Department and the local Acme Representative are available to help you plan and design your record forms.

EXTRA OPERATIONS

ON this page are illustrated 6 standard styles of VERI-VISIBLE forms; special arrangements can be provided to meet exacting conditions. The following operations are not included in the printed card prices.

ROUND HOLE PUNCHING—for each hole—70c per 1000 cards.

DIE-CUTTING—4 diagonal slots to hold smaller size cards —$7.50 base charge plus $3.50 per 1000 cards.

FOLDED CARDS—add 75% to price of size to which form is folded; use "PRINTED ONE SIDE" table.

NO VERI-VISIBLE PUNCHING—deduct $1.30 per 1000 cards.

QUANTITIES OVER 100,000—apply for price.

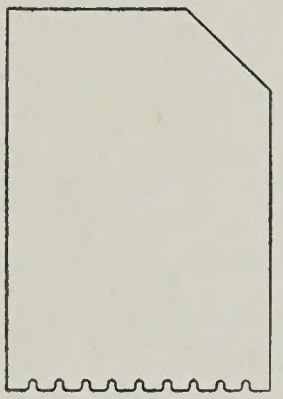
V-V PUNCHING OF CUSTOMERS OWN CARDS: First thousand $7.50; additional $4.50 per M.

½" Punching (actual size)
Used on cards having ½" and 1½" visible margins

.6" Punching (actual size)
Used on cards having .6" and 1.8" visible margins

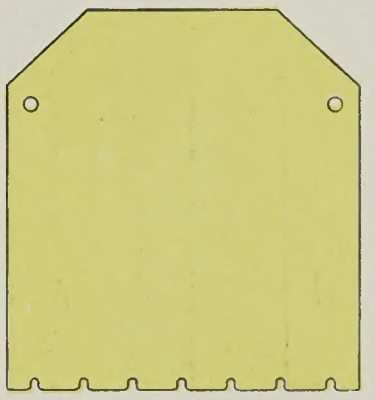
1" Punching (actual size)
Used on cards having 1" and 2" visible margins

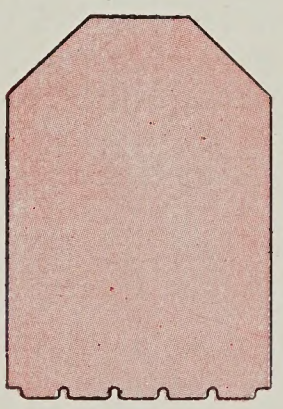
1.2" Punching (actual size)
Used on cards having 1.2" visible margin



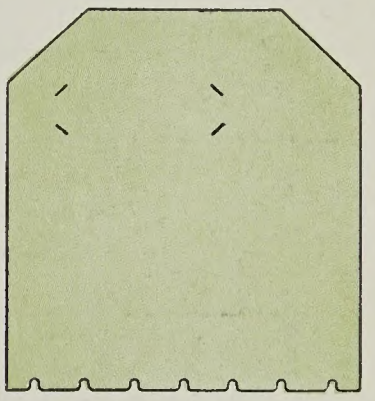
SINGLE CARD WITH ONE DIAGONAL CORNER: Used generally when cards are printed on one side only—or when both sides are printed differently; the front of the card is always face forward in the file.

CARDS WITH SIGNAL HOLES: Used to reveal the presence or absence of related record cards or data filed in conjunction with and behind the master card. The effectiveness of the signal hole is enhanced by the use of a contrasting color for the companion record form.

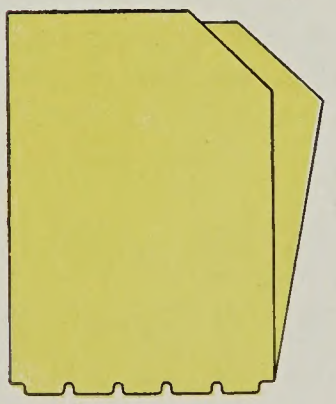




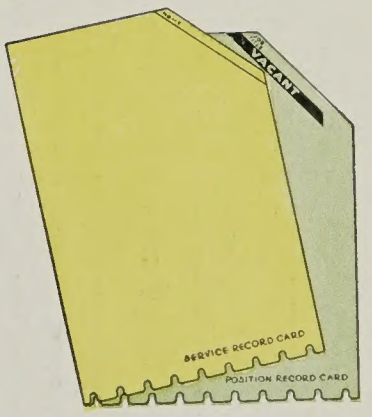
SINGLE CARD WITH TWO DIAGONAL CORNERS: Recommended always when cards are printed with the same form on both sides. When the first side is filled up, you simply turn the card in the file and continue the record. The cards, visibly indexed on both sides, are available for use by two people from opposite sides of the file.



CARDS WITH DIAGONAL SLOTS: This is a simple, effective way of holding supplementary or companion cards and slips or photographs which then become a part of the master record. The slots may be placed anywhere in the card and arranged for any size insert.



4-PAGE FOLDED CARD: Where the requirements call for considerable recording area, this arrangement is suggested. Cards may be folded at the top, at the bottom, or at either side.



SEPARATE RECORD CARDS FILED TOGETHER: Two or more different cards, or sheets, bearing on the same subject, may be filed together, one directly behind the other. There are many variations in card sizes, arrangements and colors which can be used advantageously. The particular arrangement illustrated is a combination of a "Position Record" and a "Service Record". The Position Record is indexed by title of job and remains in its respective place in the file at all times. The Service Record card, slightly narrower, is indexed by name of employee and is moved or transferred as the employee's job is changed. When there is no employee for a given job, the solid, diagonal "Vacant" block is visible.

Acme Systems Service Department

Saves time and inconvenience in changing over your present system . . . or when installing a new record system

- RECORDS TURNED OVER FOR USE
- NO OVERLOADING YOUR PRESENT STAFF
- NO HIRING OF TEMPORARY EMPLOYEES
- GREATER ACCURACY—LESS SPOILAGE
- DETAILED GUIDANCE NOT REQUIRED
- SAVINGS IN TIME AND LABOR COSTS
- RECORDS KEPT UP-TO-DATE DURING INSTALLATION

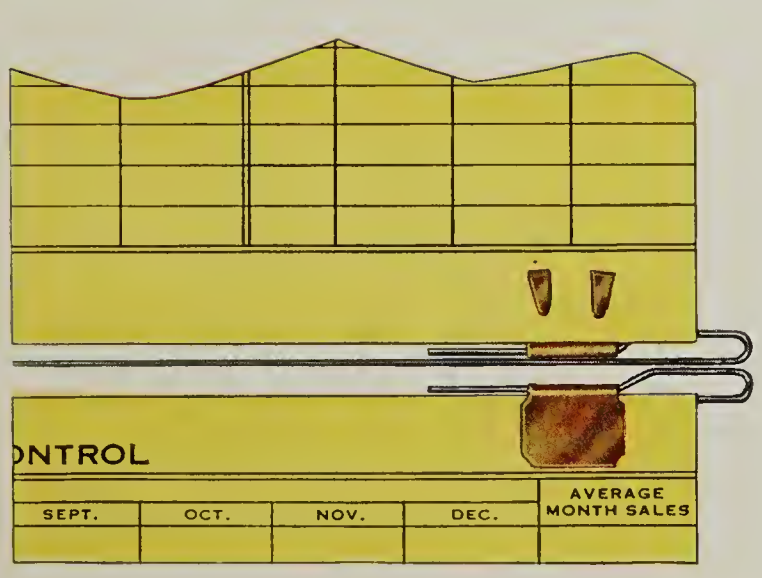
From years of experience in installing new records for almost every conceivable type of business, Acme has developed the know-how, the short-cuts, and the speedy way to make a change-over from an old record to a new, or to set up an entirely new record system. Acme has available a staff of experts ready to index and install records and to train personnel in the use of record systems. Using modern methods and the newest type of labor-saving equipment, Acme is able to render efficient service for indexing, collating, gathering, copying, hanging and Acmeloiding all types of visible records. This same service is also available for every other kind of record system. You may obtain estimates covering complete installation whereby Acme takes entire responsibility, or furnishes indexors on a per diem basis in charge of a competent supervisor.

This service relieves management of the necessity of planning, organizing and supervising the installation. It is faster than using regular personnel, spare time or overtime, as our operators are experienced in this field. Regular employees are not burdened with extra work and "business as usual" continues without interruption. Accuracy combined with neatness is assured, and the new record is installed promptly. When desirable, the entire work can be done at our factory, and delivered as a complete package, ready for use.

Proper indexing means faster finding, faster reference, faster posting, thereby saving valuable time. Complete control of new items, change of address, etc. is maintained throughout the assignment.

In addition to completing the clerical work, we prepare and furnish a manual of procedure and operation, which assures that the objectives and purposes of the record will be understood regardless of personnel changes, and continues as a guide to the correct maintenance of the system.

When we undertake a record installation, it is turned over *ready for use.*



PERMANENTLY ATTACHED HINGES FOR ACME CARDS GAIN TIME — REDUCE LABOR — SAVE MONEY

Up to now, the attachment of Acme Hinges has been a manual operation, and the time required to do this depended on the individual skill and speed of the operator. Acme has now developed and completed a mechanical means of *permanently* attaching these metal hinges to the record cards.

Cards, either blank or printed, can be supplied with the hinges permanently attached when delivered from our factory—or the record information can be completed first and then sent to the factory, for the attachment of hinges.

For very large installations, we can send the special machinery and a skilled operator to the customer's offices, so all the work can be handled and supervised on their premises.

Acme SUPER VISIBLE Card Systems...

The cards are indexed, easily and properly, on any typewriter.

Note the visible margin information is at the top of the record cards.

Visible Card Panels

Are available in two types—(1) for Posting records and (2) for Reference records. These visible card panels may be easily inserted at any point in the record system, thus providing expansion where needed. Card Carriers provide for easy insertion of single cards and rapid group shifting.

Card Sizes and Types

There is a complete range of card sizes and types from a 3¾ x 1" for purely reference or cross indexing purposes, up to an 8 x 6" for actively posted records.

Indexing

As simple as A, B, C, and easily expansible. Each guide with its large windowed tab clearly indexes 30 to 192 cards. Stock sets of alphabetic, numerical, or geographic inserts are available. Plain inserts, to be labeled individually to suit the requirements of a particular record, accompany all Card Carrier Units without extra charge.

MECHANIZED VERTICAL VISIBLE — MODERN — PRACTICAL — A NEW LOW IN COST —A NEW HIGH IN EFFICIENCY AND CAPACITY

This modern vertical visible record equipment is so fast—efficient, yet simple and practical—and so low in initial cost, space and operating cost that it is the logical vertical visible equipment for many card records.

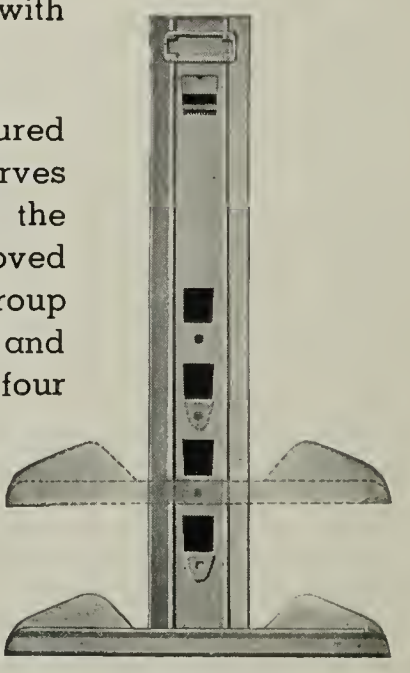
Super-Visible finger-tip control gives you a new speed and convenience. References and entries are made so easily and quickly that this modern visible method actually invites USE and prompts timely ACTION.

Large window visible guide tabs instantly accessible in a natural line of vision—provide immediate selection of any visible card panel. There are from 30 to 192 record cards VISIBLE at a glance whenever the contents are parted as shown in illustration on opposite page. The entire visible margin of every card is always exposed; the Super-Visible principle assures positive alignment and registration of the typed and signalled information.

THE CARD CARRIER

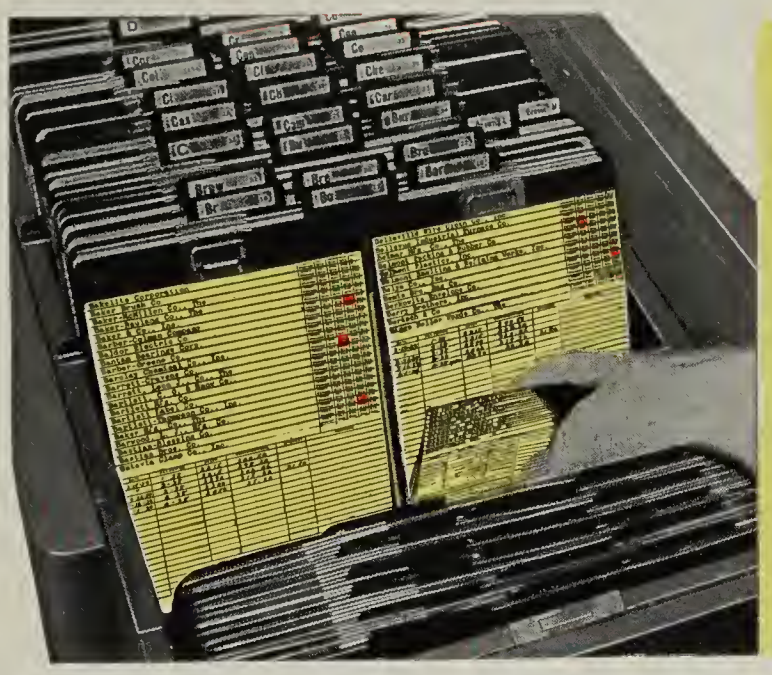
This detachable Card Runway is of patented design, spring type steel. It is instantly removed or firmly locked on the Panel with a touch of thumb and forefinger. Because the Card Runway conforms to the natural angle taken by the die-cut card wings, the cards are easily attached and slide up and down with a minimum of friction.

The steel Card Elevator, pictured at the bottom of the Runway, serves three main functions. It protects the bottom of the cards, is easily removed from the Runway to permit group shifting or transferring of cards, and slides and locks in any one of four positions. When the Runway is only partially filled, the Elevator can be raised to the position which will hold the cards higher up on the Panel, reserving space at the bottom for expansion.



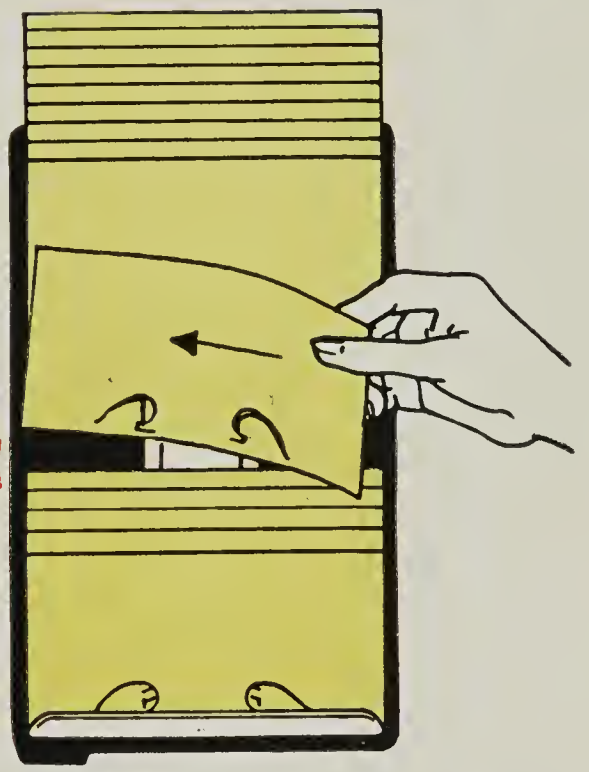
Give You These Advantages . . .

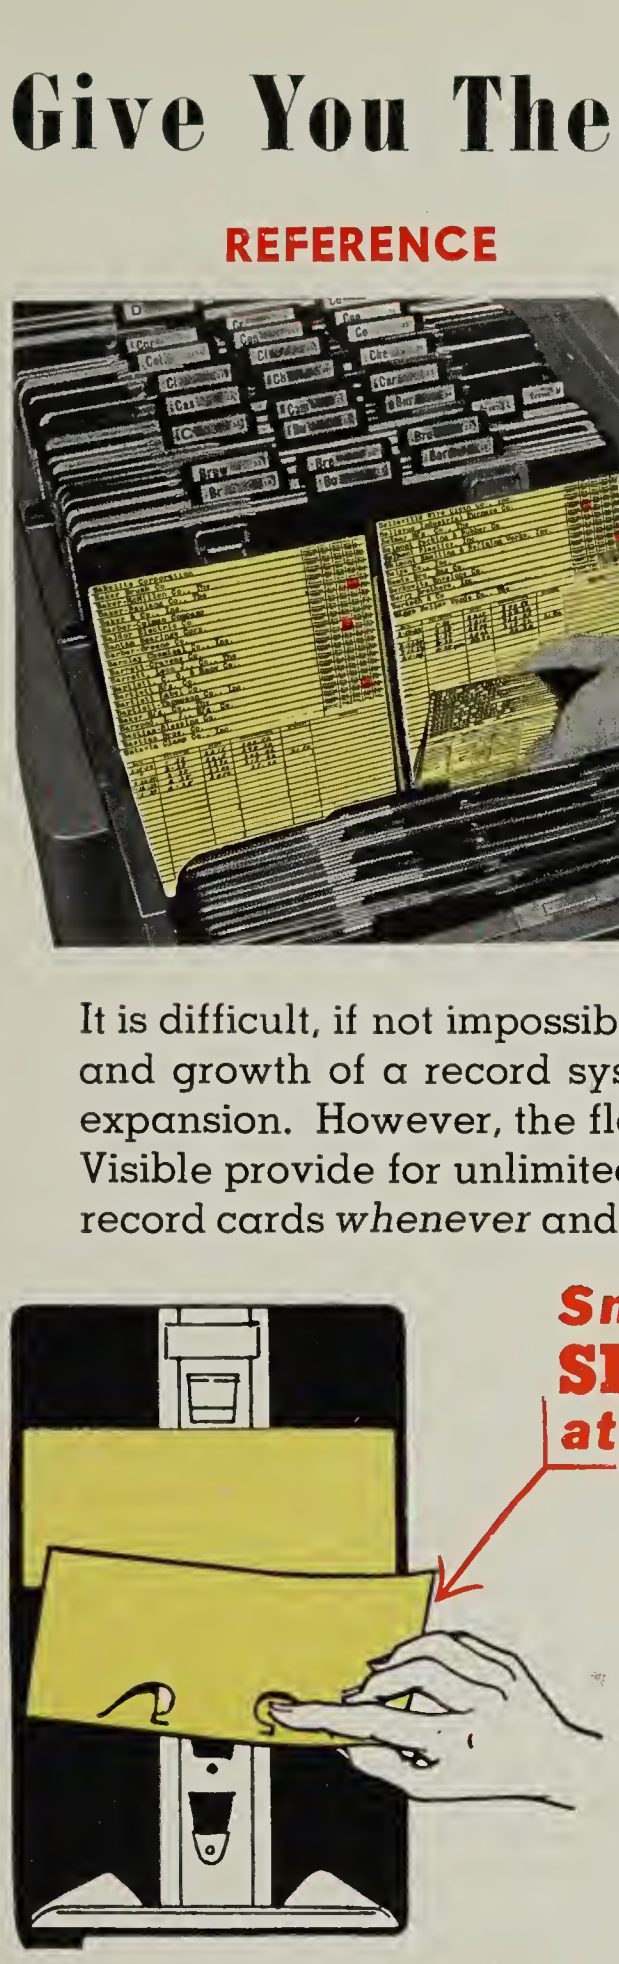
REFERENCE **SPEED IN . .** **POSTING**



- **A.** *Installation*
- **B.** *Reference*
- **C.** *Posting*
- **D.** *Shifting*
- **E.** *Expansion*
- **F.** *Transferring*

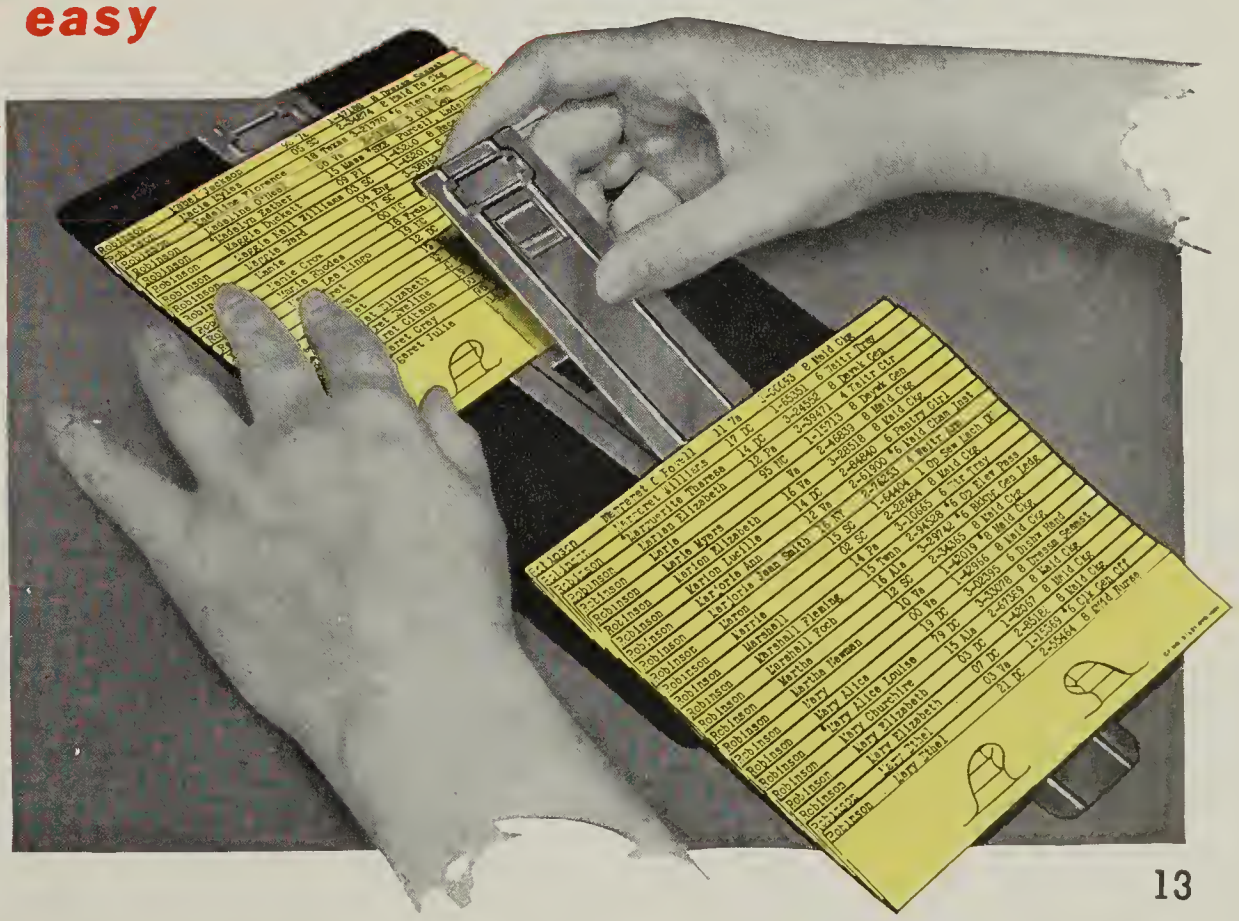
It is difficult, if not impossible, to predetermine the activity and growth of a record system and properly provide for expansion. However, the flexible features of Acme Super-Visible provide for unlimited growth and additions of new record cards *whenever* and *wherever* they are to be made.





Snap-on* SINGLE CARDS *at any point

and* REMOVE CARDS *equally as easy



GROUP SHIFTING . . .

With Acme Super-Visible you can shift entire card groups from filled or partially filled panels in less time than it takes to tell how to do it. This feature, combined with the ease and speed of inserting new panel units, at any point in the system, gives you a new economy in record keeping — it substantially cuts your clerical costs.

Certain card panels may fill up more rapidly than others. Group shifting is the easy way to equalize card groups and utilize unfilled space on adjoining panels.

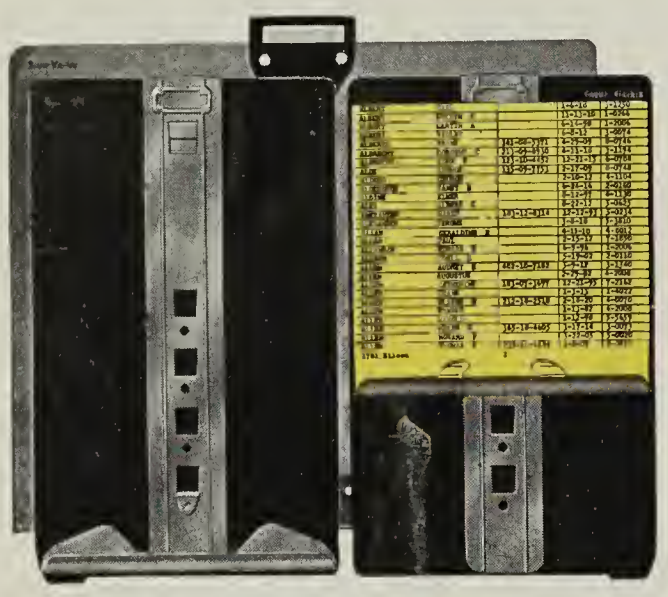
Acme SUPER VISIBLE Card Carrier Units

VISIBLE CARD PANELS

Available in two types—(1) for Posting Records and (2) for Reference Records. Visible Card Panels may be inserted easily at any point in the record system, thus permitting expansion wherever it is required. The Card Carriers on the Panels provide for easy insertion of new cards and for rapid group shifting of cards.

POSTING TYPE UNIT

Illustrated here is the No. 2 VLR-316 Removable Posting Panel Unit consisting of the Separator Indexor, the Posting Panels with Card Carriers attached, to form a complete unit.



REFERENCE TYPE UNIT

For maximum economy in minimum space. The Reference Type Unit is recommended for records to which frequent reference is made but few or no postings are required.

It consists of 1, 2, or 3 Card Carriers directly attached to a Separator Indexor made from the same light, strong material used for posting panels—including a Metal Index tab and Roll-Bearing Anchor.

NOTES

Price includes Removable Acmelite panels with detachable runways and one metal tabbed pressboard Roll-Bearing Separator-Indexor.

SEPARATOR-INDEXOR TABS—Primary Guides: No. 1V5R units, 2⅛" tabs in 3 positions; all No. VTR units, 2⅛" tabs in first 3 of 4 positions; all No. VLR and No. 2V5R units, 2⅛" tabs in 2nd, 3rd and 4th of 5 positions; all No. VCR units, 2⅞" tabs in 2nd, 3rd and 4th of 5 positions.

EXPANSION GUIDES have 1⅜" metal tabs in two positions at the right of the Primary Guides. When ordering, specify by adding "X1" or "X2" to the catalog number for corresponding Primary Units.

*Cards used in these units contain the special die-cuts

**These panels hold IBM punched cards, die-cut at the top, filed in a down-hung position (with the cards indexed at the bottom) directly on the run-ways. No Separator-Indexor guides are furnished. The panels have 2⅞" metal tabs in 3 positions; do not have roll-bearing spacers.

CAPACITIES: #2VCR-IBM-9 panels, 68 cards (34 per runway), #2VCR-IBM-11 panels, 90 cards (45 per runway).

†Explanation of Catalog Numbers: First numeral represents number of runways (rows of cards) per panel unit. "V" means vertical-visible. The number or letter following the "V" represents the width of the panel unit and determines the size of housing unit required; where the letter is followed by "T," the panel is Tariff (11 13/16") height. The letter "R" signifies the panel is "REMOVABLE," i.e., POSTING type. Suffix 316 shows the spacing (3/16") of the Roll-Bearing Anchor. Where an additional suffix "D" appears, the panel is of the Duplex type having two runways on the one panel.

*When used with cards 1" or 1 9/16" high the roll bearings will be 9/64" in diameter instead of 3/16". When ordering Reference Panels for these height cards use the suffix "964" instead of "316" after the Item No.

Price includes combination Roll-Bearing Metal Tabbed Card Panel with detachable card runways. Metal Tabs are arranged in two positions only and are 1¾" and 2⅛" wide, depending on the type of unit.

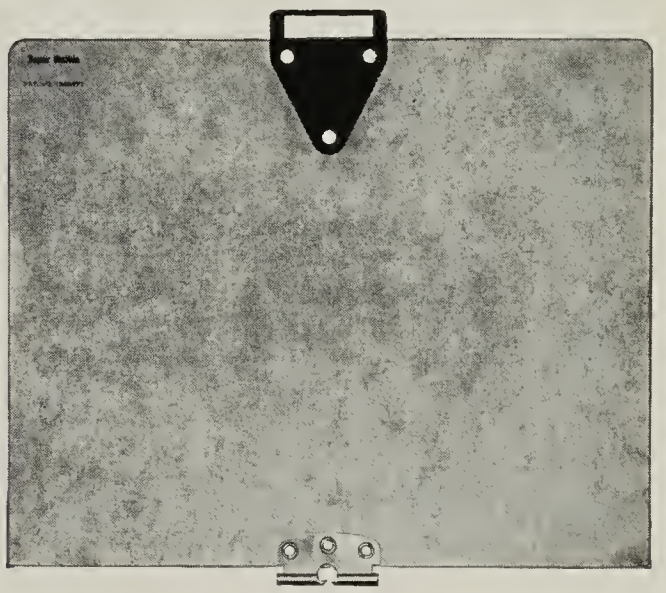
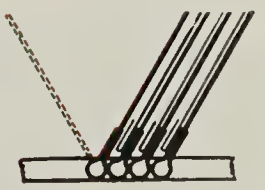
**Where lighter weight inserts are used, the number of Panels per inch will be somewhat greater.
When a larger number of inserts than two are required, please write for build-up information, giving us full facts regarding the weight and number of inserts to be filed (send sample wherever possible).
(These capacities are approximate and will vary with variations in the thickness of cards, sheets or other inserted material.)
†Average number of inserts back of each Holder Card.



ACME SUPER-VISIBLE SEPARATOR-INDEXOR



The Separator-Indexor contributes vitally to the speed and efficiency of Acme Super-Visible for both reference and posting. The patented Roll-Bearing Spacer anchors it securely in the compartment, preventing pinching, chafing and climbing of contents and permitting an easy, full-swinging or rotating action. The Roll-Bearing Separator-Indexors are inserted easily and quickly at any point in the file without disturbing the contents, and without the use of a guide rod.

Acme SUPER VISIBLE 1, 2, 3, 4 & 5 Drawer Units

PROTECTION

Super-Visible steel cabinets give privacy and protection for all types of records. The Super-Visible system is visible only to the operators—vital information is kept confidential and tamper-proof. Your records can be kept under lock and key—at night and over week-end periods they are safely housed.

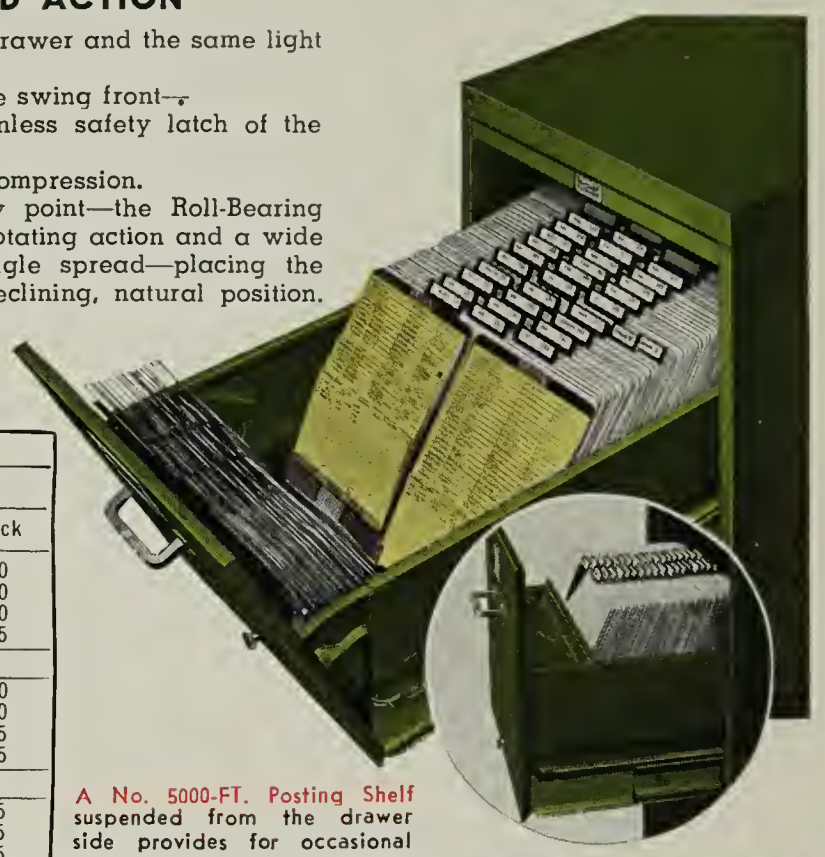
After references or postings are made the Super-Visible feature of positive compression is applied mechanically as the drawer is closed, keeping all records protected and orderly.

MECHANIZED ACTION

Just open the mechanized drawer and the same light finger action automatically

(a) unlocks and opens the swing front—
(b) disengages the buttonless safety latch of the drawer front—
(c) releases the positive compression.

Part the contents at any point—the Roll-Bearing Indexors provide an easy rotating action and a wide mechanically supported angle spread—placing the *visible* card panels in a reclining, natural position.



A No. 5000-FT. Posting Shelf suspended from the drawer side provides for occasional posting at the file, and is easily moved from one drawer to another. Zone 1, $7.45; Zone 2, $8.20; Zone 3, $8.95.

SUPER-VISIBLE Lift-Top Cabinet

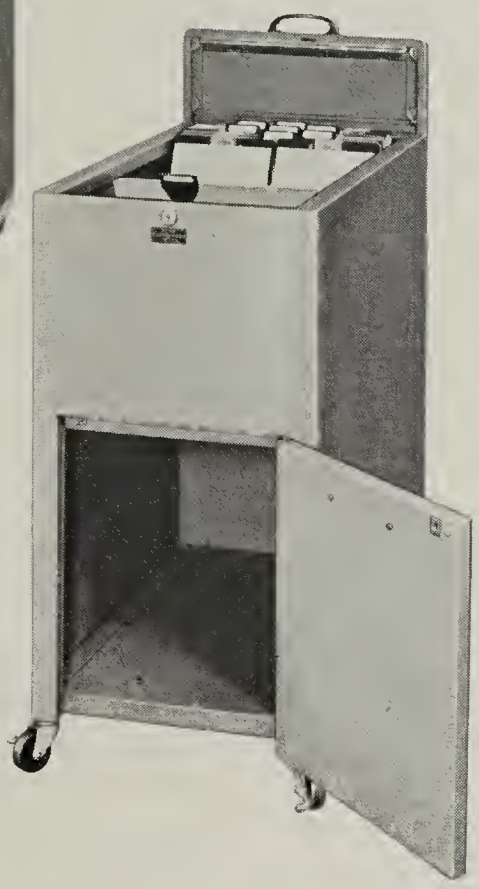
Made of prime grade furniture steel, rigidly welded and reinforced to provide many years of heavy-duty service.

The unit is equipped with a lock and four steel casters, the front two being locking casters.

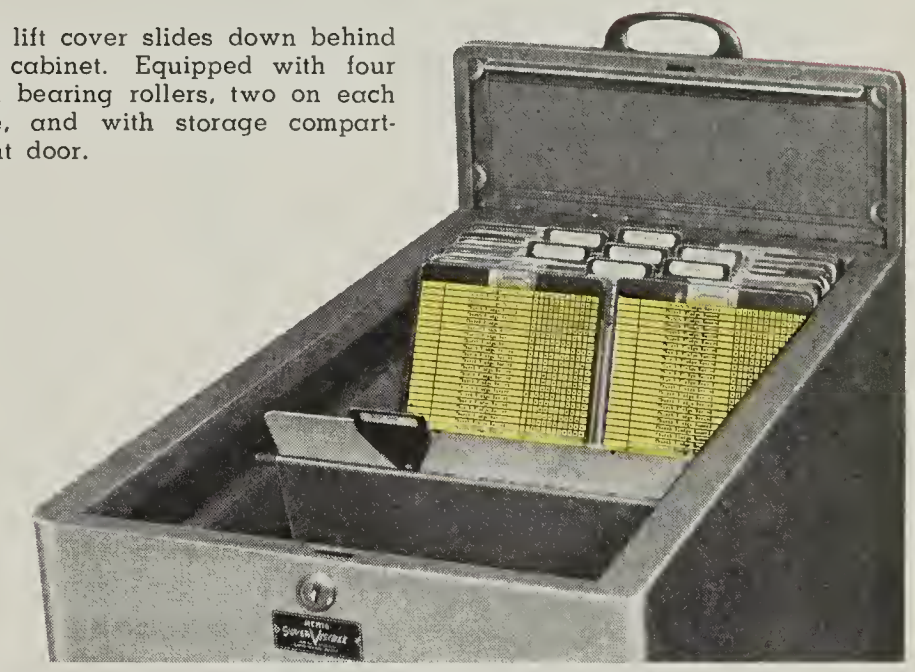
PRICES:

Item No.	Size	Zone 1	Zone 2	Zone 3
CLT-1L	Letter	$60.00	$66.00	$72.00
CLT-1C	Cap	65.00	71.50	78.00

Also available for Tariff height.



The lift cover slides down behind the cabinet. Equipped with four ball bearing rollers, two on each side, and with storage compartment door.



Finish:
Neutral Gray Wrinkle.

DIMENSIONS

CLT-1L Outside width 15"
Inside width 12-1/4"

CLT-1C Outside width 18-1/4"
Inside width 15-1/2"

Height of both units (from floor) 30-1/2" (overall)

Inside height of record compartment:
When used with regular S-V panels, 9-9/16"
When used with Tariff depth panels, 11-13/16"

Depth of both units, outside, 24-3/8"; Filing depth, 17"

Super-Visible Trays

Acme Super-Visible Tray Units are ideal for—a small number of very active records—starting a new system that may grow into a large unit—dividing a large record into small easily handled units for distribution of work.

Senior Tray Units are supplied in either Letter or Cap size. All cards are instantly available for reference or posting when the hinged cover is unlocked and lifted up. The cover may be removed entirely, if desired. Junior Tray Units are available in three sizes—Letter, Cap and Tariff. The front and back of trays have hand holds for convenience in handling.

The Letter and Cap width Junior Trays with standard height card panels may be placed crosswise in a desk or file cabinet drawer with all records readily accessible for instant use.

Senior Tray Units

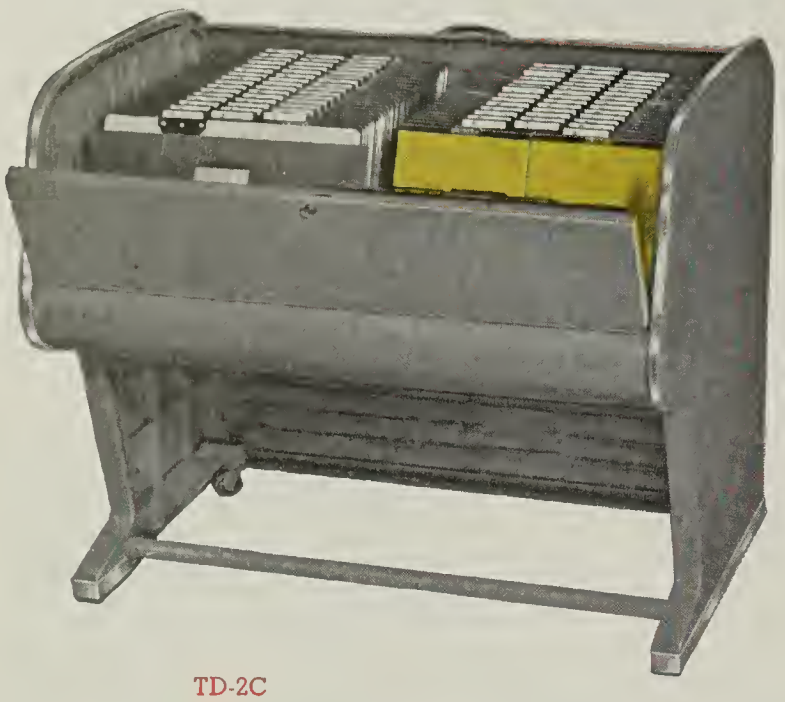
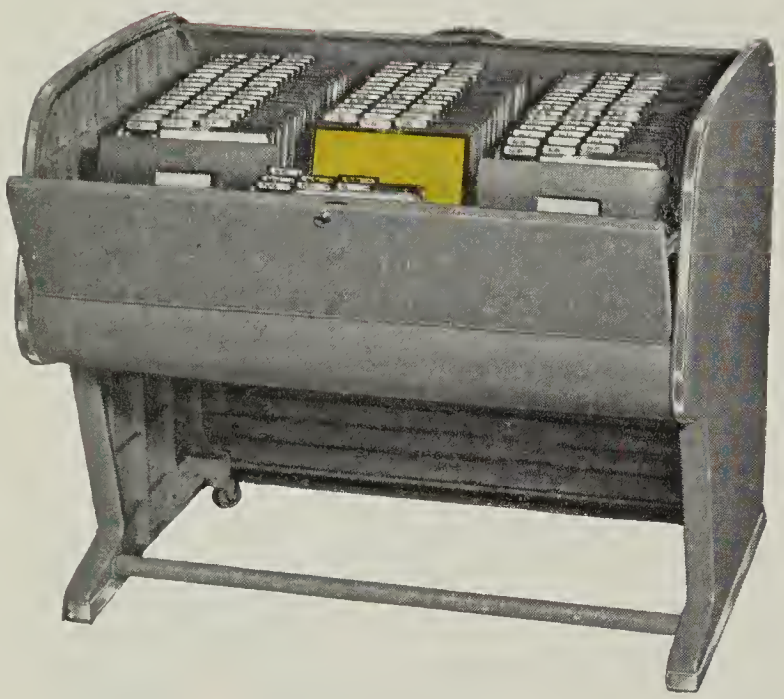
Acme SUPER VISIBLE Tub Desks-Steel



TD-2C
with
2 Cap lift-out trays



TD-3T
with
3 Tariff lift-out trays

The design of Acme Super-Visible Tub Desks provides for a wide "V" opening at any point so that reference can be made to any record without removing the card panel. With indexing titles and signals on the visible margins, at the top of the cards, all cards are readily accessible and instantly available. Entries are easily and quickly made by lifting the panel from the file and placing it in a natural posting position on the operator's desk. The panel is just as quickly and easily returned to its place in the file.

Acme Super-Visible Tub Desks accommodate *Tariff height* ($11\frac{13}{16}$") Super-Visible Card panels. These housing units are supplied with lift-out trays for the four standard width Super-Visible panels, which widths may be broadly described as Document, Tariff, Letter and Cap (legal size). They provide for a large number of records in a small amount of space.
Super-Visible Tub Desks are expertly designed; smooth-operating roll top, with lock, protects the records when not in use. Roll top opens and closes easily.

Let an Acme systems engineer show you how Acme Super-Visible Tub Desk Units may be grouped so that thousands of cards will be within reach, quickly and easily available to one operator.

ACME SUPER-VISIBLE TUB DESK PRICES

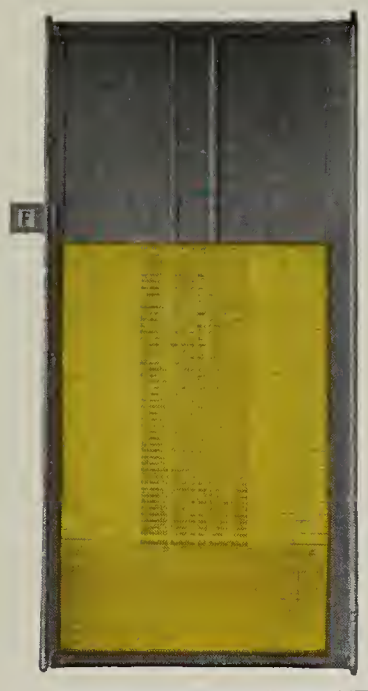
with Roll Top Closed

Acme Super-Visible Frames



We have Super-Visible card panels for use in drawer cabinets and tubs, for those records requiring privacy; and we have Super-Visible card panels in ring books, where that type is preferable.

Acme also has Super-Visible card frames in open stands (revolving or straight-line) for those records where direct and frequent reference is desired without the necessity of opening drawers or books, or lifting covers.

CONSTRUCTION

The bottom channel of each side on single frames and of each row on duplex frame is open sufficiently so the bottom of the last card nests into it.

FINISH: Neutral Gray or Black (Neutral Gray will be supplied unless "Black" is specified). Stands and brackets will be furnished in the same finish as ordered for the frames.

HEIGHT CARD: Cards used in Super-Visible frames should not exceed 3" in height. Any departure from this recommendation is at the customer's risk.

STANDS & BRACKETS: The same oblique and revolving stands and wall brackets as furnished for commercial card frames are used. See pages 22 and 23.

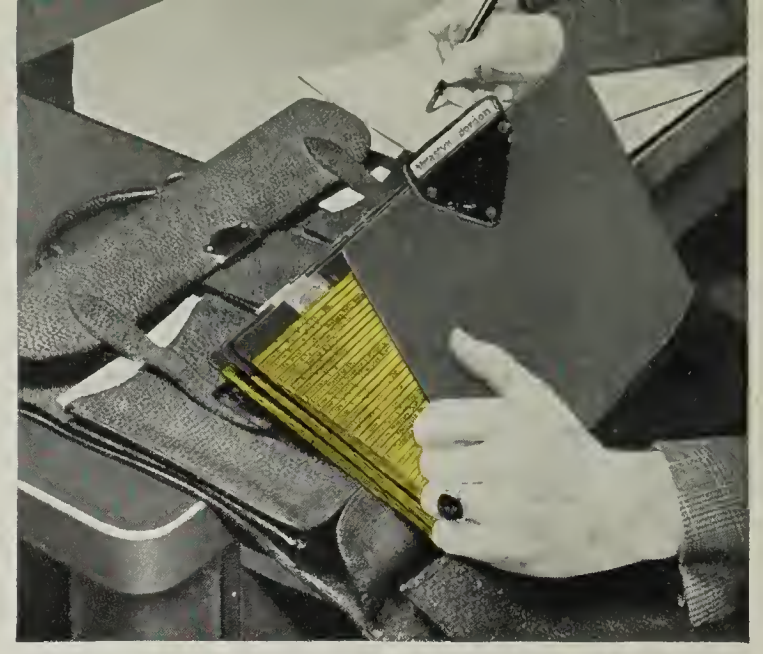
Frame numbers with prefix "D" are duplex—two card runways on each side—thus providing for two rows of cards per side.

This installation of Super-Visible Frames is one of nine in regional offices of a Government bureau. It consists of 200 duplex Super-Visible frames mounted on 4 Oblique (straight-line) stands.

Acme The VISI-Folder



Acme Visi-Folders answer the problem of taking records along on calls and trips . . . without a lot of fuss in assembling the material or copying information . . . and without imposing unnecessary work on the filing department. All that is necessary is to transfer the card carriers and cards from either the Posting or Reference Panels in the permanent file to the Visi-Folder, and the records needed are ready to take along. Visi-Folders provide complete protection for the cards when carried in a brief case and are available to accommodate all sizes of Super-Visible Cards.

Returning the cards to the files is simple and speedy; you merely remove the card carrier and replace it on the Reference or Posting Panel.

Extra sections may be attached with snap fasteners to provide for expanding the capacity of each Visi-Folder.

ACME TRANSFER FOLDER FOR SUPER-VISIBLE CARDS

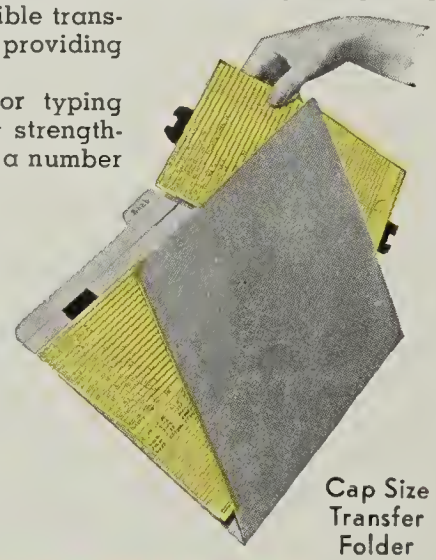
Can Be Used in Any Letter or Transfer File

The Super-Visible *Transfer Folder* provides a simple, economical method of housing *inactive* Super-Visible cards *visibly*, requiring little more in space than for non-visible transfer filing, and at the same time providing much greater speed of reference.

Gummed labels can be used for typing the tab captions. They will further strengthen the tabs, and being available in a number of colors can be used to indicate different classifications in the file if desired.

The cards are carried on removable Vulcanized Fibre Runways, in the same manner as on our Card Carrier Panel Units, and transferring or shifting of cards in groups is easily accomplished.

They are furnished in Letter, Cap, and Tariff-Ledger sizes, to accommodate all standard Super-Visible card sizes.



Cap Size Transfer Folder

Acme The VISI-Filer

FOR DESK OR FIELD USE

A Compact, Portable, Super-Visible File.

The Acme Visi-Filer makes it possible to keep Super-Visible records handy for close study—or to take them along on a trip. A larger number of records than can be readily handled in Visi-Folders may be kept—always ready for quick reference. The Visi-Filer will hold up to 1560 visible cards in only 1/6 of a square foot of space. This capacity may be multiplied by several Visi-Filers (maximum of 5) together.

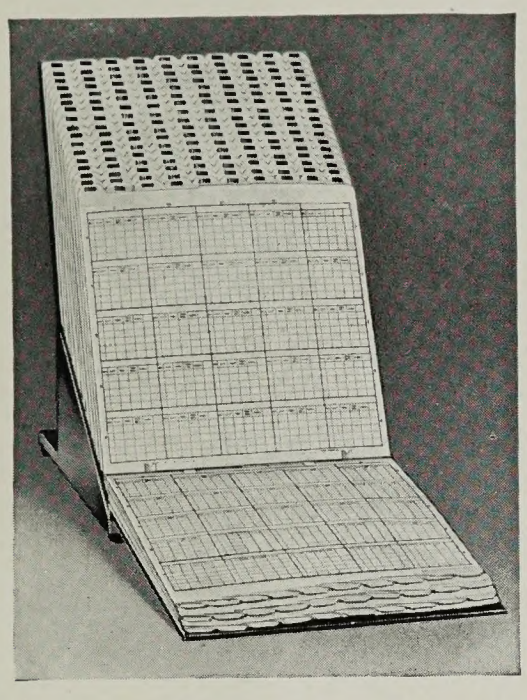
Acme RAPID REFERENCE Card Stands

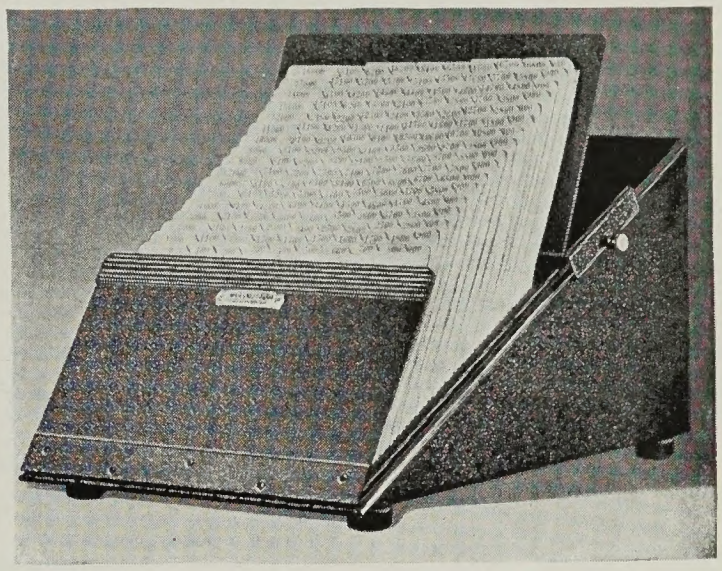


In these units the visible indexing is at the top and the cards are turned down (rather than up) exposing both sides. Rapid Reference Stands are made in three styles: Single Hanger Stand with fixed card support (for cards 5" to 15" wide); Double Hanger Stand with fixed card support (for cards 8" to 15" wide); and Double Hanger Stand with adjustable (follower-block style) card support.

The Rapid Reference Stands provide for cards made to suit your own requirements; any width, any height, any form, any arrangement of the tabs. The tabs on the cards can be plain, printed and covered with celluloid, or insertable celluloid.

WIDTHS

Single hanger stands, 5" to 13"; Double hanger stands, 8" to 13". Cards may be any desired height and may also be 2" wider than stand.



EQUIPMENT
4 Hinges per hanger, hinged metal front card.

CARD STOCK
Heavy Duratag; price 55c per sq. in. per M cards.

TAB CUTTING
Less than 1M cards of a position, $1.15 per position. 1M or more per position, $1.50 per M cards.

CELLULOID TABS (Permanent or Insertable)
Prices on application. Where permanent tabs are to be furnished, please supply a list of the printing to appear on each tab; minimum quantity, 10 sets all printed alike.

Acme Open Frame Equipment . . .

In connection with some records where cabinet equipment is not required, a variety of open frames and stands are available, permitting various arrangements to meet individual requirements.

The same principle of visibility used in cabinets applies to the open frames. The frames come in units, 11, 15, 20, and 24 in. high, and are made for all sizes of cards from 4 to 13 in. wide, and whatever depth may be required, from 2 in. up.

Acme open frames hold cards on both sides, and for cards up to 6 in. wide they are made in single and duplex width holding either one or two rows of cards on each side.

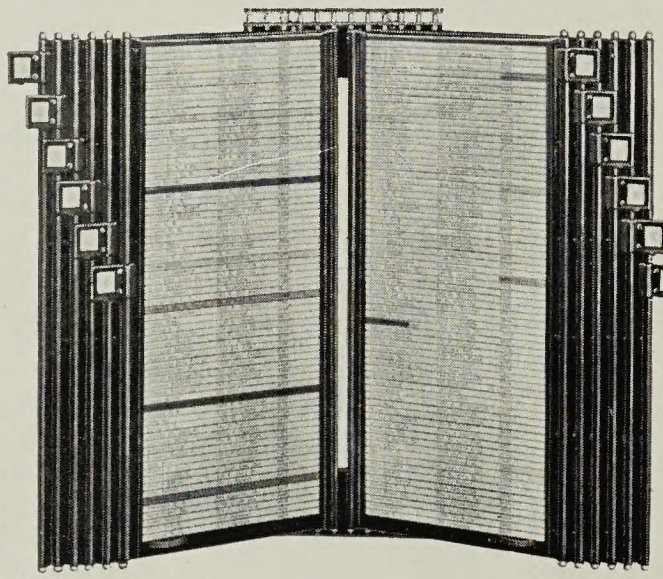
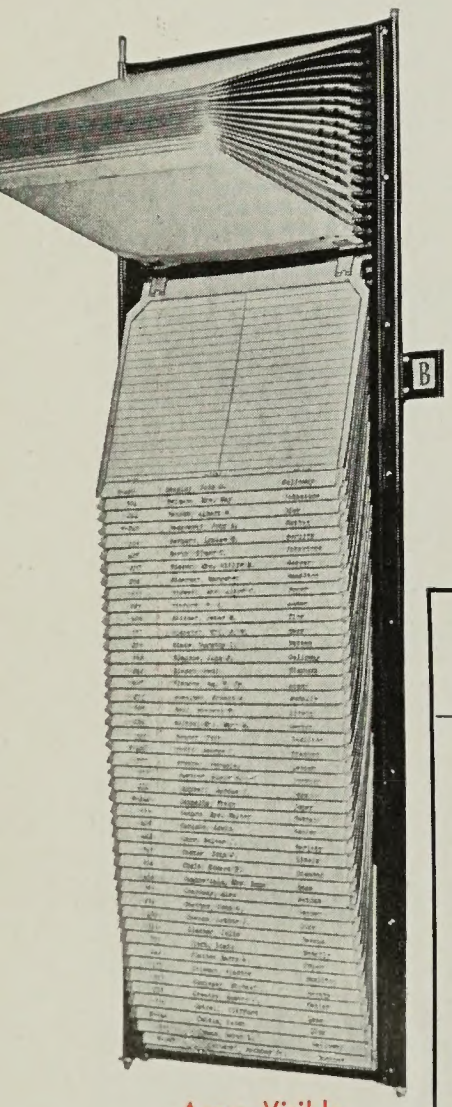
Duplex Frames have twice the capacity listed.

Where cards of depths other than those listed are to be used, add to or deduct for each 1", 5 per column (3/16"); 4 per column (1/4"). Length of frames: Indicated by last two digits in "Frame No."

Frame prices include raised prong type card hangers, 2 hinges per hanger, metal top cards and a metal index tab on the two-sided frames. No reduction in price for omission of tab.

Single face (one side) frames have eyelet in top.





Acme Visible Pocket Frames With Steel Hinged Pockets

WALL BRACKETS: At times it is desired to utilize wall space for certain reference records. For such occasions we have provided Wall Brackets of various sizes. These brackets come to the user complete with the means for attaching them to the wall. Wall Bracket can be made to accommodate any number of frames.

Duplex Frames have two rows of pockets.

Each of these one-sided frames has a corner-cut extended piece at the top with a key-hole slot in the top center for hanging purposes.

Stands... Brackets... Racks

A variety of stands are furnished for holding Acme card frames. The type best suited depends entirely upon the use of the record; for instance, for an entry record the Bookkeeper's stands are recommended. These hold the frames in the most natural position for writing, and in the stands the frames are turned as leaves in a book.

Bookkeeper's stands are made in two sizes to hold nine or eleven frames respectively. As many units as expedient can be joined together and the complete unit placed on a portable mercantile table, if desired, so that the record can be moved about at will.

STANDS FOR COMMERCIAL FRAMES

Stand No.	Type	PRICE Zone 1	PRICE Zone 2	PRICE Zone 3	Hole Spacing	Card Frames	Tube and Flex. Fr.

⅜" exposure also available; capacities ⅓ more than ½" exposure. Prices same as for ¼" exposure.

There are numerous records where the cards are short lived and constantly changing. For such records we offer our Pocket Rack as being the most practical and of greatest utility. The device is a series of pockets made of heavy document manila, allowing for sufficient exposure at the top to visualize indexing data. With this device the very cards or sheets you are now using are utilized—and all the papers pertaining to one subject are kept together in one pocket.
